WHERE IT GOES

This part in colour, its neighbours in grey

HOW TO MAKE IT AND HOW IT FITS

Make three. Structural tube 88.9 x 3.2 mm, yield at least 310 MPa, cut 4,364 mm long, ends square. Not water pipe.
End caps: 8 mm discs, 100 mm across, welded on both ends.
Tongues: 60 x 90 x 16 mm plate, one welded to the middle of each cap, in line with the tube; the two tongues lie in the same plane. 21 mm pin hole 60 mm from the cap face.
Pin hole to pin hole: 4,500 mm. Set it in a jig.
Leg 1: weld the winch bracket (WSL-DWG-104) before galvanising.
Drill a 10 mm vent hole near each end; galvanise.
Check: pin centres 4,500 mm apart within 3 mm; leg straight within 5 mm; all three legs the same length within 2 mm.

WELLSLING

github.com/BoujeeEnjinia1701/wellsling

WellSling: tripod leg (make 3; leg 1 carries the winch bracket)
